

Ahmet Fatih Yegen

Software Engineer | AI Automation & Modern Full-Stack Developer

Istanbul, Türkiye • fatihyegen.09@gmail.com • 0505 034 00 09 • fygen.github.io • fatihyegenfygen

Summary

Results-oriented Software Engineer specializing in modern web architectures and workflow automation. Proven track record in building responsive Next.js and SvelteKit applications, developing decoupled Micro-Frontend (MFE) architectures, and deploying custom Python/Node.js automation scripts. Passionate about leveraging LLM APIs, n8n, and dynamic JavaScript/TypeScript stacks to drive operational efficiency in fast-paced startup environments.

Experience

Alpler Ziraat Aletleri A.Ş., Software Development Specialist Engineer – Aydın, Türkiye Jan 2026 – present

- Engineered and deployed custom Python data automation scripts and automated web crawlers to streamline factory production monitoring, significantly reducing manual reporting workflows.
- Resolved persistent server-side CCTV camera system failures by deploying and configuring the open-source AgentDVR platform, improving surveillance uptime by 40%.
- Integrated Python and C++ backend frameworks to process real-time machine vision tracking and autonomous pathing algorithms over network sockets.

Akasya Teknoloji ve Bilişim A.Ş., Software Development Specialist – Istanbul, Türkiye Sept 2025 – Oct 2025

- Synchronized decoupled micro-frontend (MFE) profile views with Django REST Framework and GraphQL API endpoints, ensuring seamless cross-domain data streaming and hydration.
- Developed and injected custom React modules into predefined user profile slots utilizing the Open edX Frontend Plugin Framework, decoupling legacy UI code.
- Re-architected the eduvence.com home page and core landing interfaces, optimizing multi-device layouts to improve initial load speeds.
- Streamlined platform deployment workflows by authoring custom plugins to automate Docker container compilation and production orchestration pipelines.

Port Kargo Ve Lojistik A.Ş., Software Development Specialist – Istanbul, Türkiye Sept 2023 – Jan 2025

- Architected scalable enterprise web applications using .NET Core, Next.js, and SvelteKit architectures, cutting system latency by 20%.
- Engineered frontend components using React and TypeScript, enhancing user interface responsiveness for critical HR and logistics modules.
- Automated legacy project migrations to Git repositories using custom PowerShell scripts and accelerated processing pipelines via WSL Bash workflows.

Projects

Advanced Modular Web & AI Automation Architecture Feb 2026 – present

- Architected modern web platforms utilizing SvelteKit, Next.js, and Drizzle ORM, integrating secure session hydration with Better Auth architectures.
- Engineered production-ready IoT and automation layers utilizing n8n, Node-RED, and MQTT pipelines to orchestrate real-time data collection and LLM API processing.
- Constructed automated web crawlers in Python designed to execute recursive directory traversal, document download automation, and automated text parsing.

Education

Cert. 42 Istanbul, Cert. in Intensive Software Engineering Curriculum – Istanbul, Türkiye Nov 2023 – Nov 2025

- Mastered rigorous peer-to-peer software development specializing in system-level data structures, complex algorithms, and scalable web backend principles.

BS Pamukkale University, BS in Electric and Electronics Engineering – Denizli, Türkiye Sept 2014 – June 2020

Skills

Core Stack: TypeScript, JavaScript, Python, C#, SQL, BASH

Frontend & Web: Next.js, SvelteKit, React, Tailwind CSS, HTML5/SCSS, Micro-Frontends

Backend & AI Automation: Node.js, .NET Core, Express.js, n8n, Node-RED, RESTful APIs, GraphQL

Database & DevOps: PostgreSQL, Drizzle ORM, Entity Framework, Docker, GitHub Actions, Linux (Ubuntu)
