

Ahmet Fatih Yegen

Software Engineer | .NET, Full-Stack & Automation Developer

Istanbul, Türkiye • fatihyegen.09@gmail.com • 0505 034 00 09 • fygen.github.io • fatihyegenfygen

Summary

Results-oriented Software Engineer with a solid background in Electrical and Electronics Engineering. Proven track record in designing robust .NET Core backends, optimizing relational databases, and building responsive JavaScript/TypeScript applications (React, Next.js, SvelteKit). Adept at workflow automation, industrial robotics integration, and leveraging LLM APIs to drive operational efficiency and digital transformation.

Experience

Alpler Ziraat Aletleri A.Ş., Software Development Specialist Engineer – Aydın, Türkiye Jan 2026 – present

- Revitalized and reprogrammed an idle 3-axis KUKA industrial robot by analyzing legacy technical documentation, restoring its manufacturing operational capacity.
- Resolved persistent server-side CCTV camera system failures by deploying and configuring the open-source AgentDVR platform, improving surveillance uptime by 40%.
- Engineered and deployed custom Python automation scripts to streamline factory production monitoring, reducing manual reporting workflows.

Akasya Teknoloji ve Bilişim A.Ş., Software Development Specialist – Istanbul, Türkiye Sept 2025 – Oct 2025

- Re-architected the eduvence.com home page and core landing interfaces, optimizing multi-device layouts to improve overall layout rendering and initial load speeds.
- Developed and injected custom React modules into predefined user profile slots utilizing the Open edX Frontend Plugin Framework, decoupling legacy UI code into a modular architecture.
- Synchronized decoupled micro-frontend (MFE) profile views with underlying Django REST Framework and GraphQL API endpoints, ensuring seamless cross-domain data streaming and user state hydration.
- Streamlined platform deployment workflows by authoring custom Tutor plugins to automate Docker container compilation, MFE image building, and production orchestration pipelines.

Port Kargo Ve Lojistik A.Ş., Software Development Specialist – Istanbul, Türkiye Sept 2023 – Jan 2025

- Architected and maintained scalable .NET enterprise web applications using N-Tier, Onion Architecture, and MVC Razor Pages, cutting system latency by 20%.
- Optimized data access layers and complex relational database schemas with Entity Framework and MSSQL, reducing slow-running query execution times by 35%.
- Engineered frontend components using React and ABP Framework, enhancing user interface responsiveness for critical HR and cargo point summary modules.
- Integrated high-performance 1D/2D Datamatrix barcode scanning modules into React Native mobile applications, boosting warehouse processing speeds by 25%.
- Automated legacy project migrations to Git repositories using custom PowerShell scripts and accelerated EPL barcode processing pipelines via WSL Bash workflows.

Alpler Ziraat Aletleri A.Ş., Automation and Maintenance Development Engineer – Aydın, Türkiye Jan 2023 – Aug 2023

- Programmed industrial PLC and HMI automation systems utilizing ISPSOFT, WPLSOFT, and DOPSOFT platforms for heavy machinery.
- Drafted and evaluated complex electrical schematics, Piping and Instrumentation Diagrams (P&ID), and electronic circuit blueprints.
- Executed advanced diagnostics and preventative maintenance on automated production lines, reducing operational downtime by 15%.

Uğur Deep Freezers I.C., Engineer Intern – Aydın, Türkiye Aug 2019

- Assisted the automation team in PLC troubleshooting and observed assembly line optimization techniques.

- Contributed to R&D documentation and analyzed industrial centrifuge performance metrics.

Projects

Advanced Modular IoT & Web Architecture

Feb 2026 – present

- Architected and deployed modern web platforms utilizing SvelteKit, Next.js, and Drizzle ORM, integrating secure session hydration with Better Auth architectures.
- Engineered production-ready IoT communication layers utilizing MQTT, Modbus, Node-RED, and n8n pipelines to orchestrate real-time hardware data collection.
- Designed modular firmware leveraging C++ for ESP8266/NodeMCU systems, implementing high-precision ADS1115 ADC data processing and OLED diagnostics dashboards.

Education

BS Pamukkale University, BS in Electric and Electronics Engineering – Denizli, Türkiye Sept 2014 – June 2020

- GPA: 3.14/4.00
- Developed a semi-supervised machine learning model utilizing Advanced Optimization Techniques for predictive data analysis.

Cert. 42 Istanbul, Cert. in Intensive Software Engineering Curriculum – Istanbul, Türkiye Nov 2023 – Nov 2025

- Mastered rigorous peer-to-peer software development projects specializing in C programming, UNIX memory management, BASH scripting, and system-level data structures.

Exch. Warsaw University Of Technology, Exch. in Electrical Engineering & Electronics and Information Technology – Warsaw, Poland 2016-09 - 2017-06

- Completed 2 semesters focused on control systems and electronics with an academic average of 70/100.

Skills

Programming Languages: C#, TypeScript, JavaScript, Python, C, SQL, BASH, PowerShell**Backend & Architecture:** .NET Core, Entity Framework, Node.js, Express.js, Django, RESTful APIs, GraphQL, Microservices, Onion Architecture**Frontend & Mobile:** React, React Native, Next.js, SvelteKit, Blazor WebAssembly, HTML5, CSS3, SCSS**Databases & DevOps:** MSSQL, PostgreSQL, MySQL, SQLite, Docker, Git, GitHub Actions, WSL, Linux (Ubuntu/Kali)**Industrial Automation:** PLC Programming (ISPsoft, DOPSoft), MQTT, Modbus, Node-RED, n8n, KUKA Robotics

Certificates

Backend Development and APIs

FreeCodeCamp Certification

Relational Databases

FreeCodeCamp Certification

Front End Development Libraries

FreeCodeCamp Certification

JavaScript Algorithms and Data Structures

FreeCodeCamp Certification

Responsive Web Design

FreeCodeCamp Certification

Python Machine Learning

Udemy Certification
